Whoami

I have more than 15 years of experience as a developer working on software for the browser.

My education is in UX, but it has never formally been my job title. I prefer coding and focusing on the technical side of things.

I have used (and built) more tools and frameworks than what's on the right here. But this seems like a fair representation.

Experience

2017 – now

Expert software developer

Nordea

Working on the frontend at Nordea where I have built a set of ui components which will be used in most (all?) future web projects. I also regularly do workshops with other frontend developers, and have done a bit of mentoring as well. Latest project is laying the foundation for migrating more than 250K lines of AngularJS code to Angular.

node.js / Web-Components / React / Angular / HyperApp / SASS / ReasonML / TypeScript

2015 – 2017

Software developer

Founders

Working in a very small team in purely js (both front and back), creating prototypes, proof of concepts and what would eventually amount to real projects.

React / node.js / Postgresql / Stylus

2013 – 2015

Software developer

Zmags

Working with frontend and design in a team of about 9 developers and 2 designers on a web app. I did work ranging from maturing stories (pre development), to mocking up ideas for rapid testing, to implementing solutions in JavaScript.

BackboneJS / LESS / Grunt.js

2009 – 2013
part time

UX Designer & developer

Place2Book

My role was everything design, UX, and frontend, plus the rare backend fix when necessary. The backend was built in Ruby on Rails, and when I joined I introduced Sass, jQuery, and later CoffeeScript and Bootstrap.

jQuery / Bootstrap / SASS / CoffeeScript

2010 – 2012

Co-founder

Planely

Finding backenders to accompany me in building a web app. The backend was first written in PHP (Zend framework), but later we changed to Haskell and Yesod framework. I did everything design (both online and offline), presentations, team building and recruiting, as well as the entire frontend.

2002 – 2013
part time

Freelancer

For a period of ten years or so I was taking in a lot of various small frontend and design projects on a freelance basis. The jobs was varied, ranging from simple static html pages to full fledged UX research and frontend implementation on existing backends.

2006

CSS Spec work

WHATWG

I took a year off studies to work with WHATWG on the spec for what became html5 and css3. The work I did consisted mostly of documenting css rendering errors in browsers. During this time I also worked on a friend's startup that eventually failed.

Education

2010 – 2013

Digital Design & Communication (Cand.It.)

ITU

Master in Digital Design & Communication with UX as speciality.

2005 – 2010

Bachelor

Blaagaard Seminarium

Bachelor in teaching mathematics, English, Social science, and History.

2002 – 2004

Chemical Engineering (Not finished)

Danish Technical University, DTU

I did not enjoy my time there and dropped out after a few years.
